SYNTHETIC SAMPLE PAPER - fictional, for pipeline testing only

Back-Translation for Domain Adaptation in Swahili Medical Translation

Abstract

We study domain adaptation for Swahili medical translation using back-translation. We evaluate on OPUS-100 with BLEU.

1 Introduction

General-purpose translation systems perform poorly on medical text. Domain adaptation with synthetic data can reduce this gap.

2 Method

We back-translate Swahili medical monolingual text to create in-domain parallel data.

3 Results

Back-translation reaches 26.5 BLEU on OPUS-100 for Swahili.

4 Limitations

We evaluate only Swahili.

5 Future Work

We will study domain adaptation for other African languages such as Yoruba.
