SYNTHETIC SAMPLE PAPER - fictional, for pipeline testing only

LoRA Adapters for Yoruba Machine Translation

Abstract
We apply LoRA adapters to low-resource machine translation for Yoruba. We evaluate on FLORES-200 with BLEU.

1 Introduction
Yoruba is a tonal language with limited parallel data.

2 Method
We train LoRA adapters on a pretrained multilingual model with Yoruba parallel data.

3 Results
LoRA reaches 15.1 BLEU on FLORES-200 for Yoruba.

4 Limitations
We only report BLEU, and only on one test set.

5 Future Work
We plan to evaluate adapter-based translation on Hausa.
